# DHENMARC T. NOVAL

Compostela, Cebu, Philippines | dhenmarctagsip@gmail.com | https://github.com/dhenzou19

## PROFESSIONAL SUMMARY

Motivated 4th-year Bachelor of Science in Information Technology (BSIT) student from Cebu Technological University - Danao Campus. Possesses a highly logical and detail-oriented approach to software engineering, with clean hands-on execution using PHP, Next.js, and backend system logic. Experienced in structuring architectures with modern environments like Docker and handling complete repository pipelines via Git/GitHub. Brings strong accountability, a structured work ethic, and proactive task ownership to development teams.

## EDUCATION

**Cebu Technological University – Danao Campus**
Bachelor of Science in Information Technology (BSIT)
Expected Graduation: 2027 | Current 4th Year Student

## TECHNICAL & CORE SKILLS

• **Languages & Frameworks:** PHP, JavaScript, Next.js, Node.js (Express), HTML5, CSS3, Tailwind CSS • **DevOps & Tools:** Docker, Git, GitHub (Version Control, Repository Pushing & Architecture workflows)

• **Databases:** PostgreSQL, MySQL, SQL structures via XAMPP development environments

• **Professional Competencies:** Project Ownership, High Accountability, Proactive Code Management, Systems Optimization

• **AI & Productivity Tools:** Claude, DeepSeek AI (Leveraged for efficient code optimization and debugging workflows)

## ACADEMIC & CAPSTONE PROJECTS

**Full-Stack Capstone Application & PHP Web Deployments**

• **Containerized Environment:** Configured and initialized the application workspace using Docker containers to maintain isolated and reproducible production-aligned environments.

• **Database Management:** Built, optimized, and maintained relational schema architectures utilizing PostgreSQL and MySQL environments.

• **Code Integrity:** Assumed clean ownership of team deployment branches by executing version control structures and repository pushes using Git and GitHub workflows.

• **Backend Frameworks: Implemented** backend server endpoints, object-oriented concepts, and clean controller logic architectures to safely dispatch structured datasets.

• Conducted seamless deployment configurations by hosting the responsive client-side interface on Vercel while running background backend servers and live databases on Render.
